Replacement of doors and windows at Lyneham Church Hall

Lyneham Church Hall requires urgent replacement of the main entrance door, back door, fire escape door and windows. The current fittings - all PVC and double glazed - have been in place for many years and despite regular maintenance and repair have deteriorated with age and use to the point that they are no longer functional or compliant.

The main entrance door and back door have been repaired many times but are now beyond further repair. They are very difficult to lock and require serious force (with a hammer) to open. The glass panels have blown and moss grows around the panels.

The fire escape door is also difficult to open and close, the panels are blown and the door threshold has a raised step which makes it difficult for disabled use and a potential trip hazard in the event of an evacuation. This would not meet current DDA requirements.

The hall has a number of double glazed window units. The glass panels in these windows have blown, the locks are very difficult to operate or are non-functional and the frames have gaps leading to heat loss and potential security risk.

There is an urgent requirement to replace the doors and windows of the hall as soon as possible to improve energy efficiency and improve the safety, security and accessibility of the Hall which is a well used community meeting space.
